UserList

```
constructor(props) {
    super(props);
   this.deleteCustomer = this.deleteCustomer.bind(this);
}
deleteCustomer(id) {
    let usrs = this.state.users.filter(user => user.id !== id);

   //  this.state.users = usrs; // doing this state changes, but no reconcillation

    // // async code to update state and trigger reconcillation
    this.setState({
        users: usrs
    })
}

render() {
    return (
        <div>
            <Filter filterEvent={this.filterCustomers.bind(this)}/>
            {
                this.state.users.map(user => <User user={user}
                    // delEvent={this.deleteCustomer.bind(this)}
                    delEvent={this.deleteCustomer}
                     key={user.id} />)
            }
        </div>
    )
}
```

```
export default class User extends Component {
  deleteCustomerRow(id) {
    console.log("User : ->", id)
    this.props.delEvent(id);
  }
  render() {
    let {id, firstName, lastName} = this.props.user; //destructring
    return (
      <div className='row'>
        {firstName}, {lastName}  
        <button onClick={() => this.deleteCustomerRow(id)}>Delete</button>
      </div>
    )
  }
}
```
